SEARCH & RESCUE**

Saving Lives on the Water

Salus SAR *rescue vest*

As a professional rescuer, you want nothing that will get in your way or let you down. Sometimes, having the right equipment will make the difference between a successful or failed rescue.

With the careful placement of foam, we are able to achieve optimum flotation (23 lbs. of buoyancy to lift two people) while providing maximum flexibility and enhanced comfort.

As you never know who the next man or woman will be to make the rescue, one of the most important features in the SAR vest, is that it was designed as a one-size fits all vest. The SAR rescue vests have been designed to provide convenient and quick donning for large and small personnel.

The convenient - pull forward - adjustment straps allow you to don your vest quickly and easily both in summer and winter (while wearing gloves) therefore allowing you to give your rescue your fullest attention. The large arm holes, narrow shoulders and high waist allow the entire design to reach and bend with you, providing a standard of performance never seen before in a rescue style PFD.
